Summary

Full-stack developer specializing in real-time systems and AI-integrated applications, with production experience in Socket.io collaboration tools and Gemini API-powered platforms. Seeking remote full-stack roles.

Education

Bachelor of Science — Electronics & Communication Engineering, 10/2024 – Present
Adama Science and Technology University (ASTU) Adama, Ethiopia
Relevant Coursework: Computer Science fundamentals, C++ programming, Python, data structures, digital systems, and computer networks.

Technical Skills

Languages JavaScript (ES6+), TypeScript, Python, C++, HTML5/CSS3	Front End React.js, Tailwind CSS, Shadcn/UI, Framer Motion
Back End & Databases Node.js, Express.js, Socket.io, AI Integration, RESTful APIs, MongoDB, MySQL	Tools & Security Git, GitHub, Postman, Vercel, Render, Jest, Zod, JWT, Google OAuth 2.0

Projects

ShipIt — Real-Time Kanban Collaboration Platform, 04/2026 – Present <i>Stack: React, TypeScript, Node.js, Socket.io, MongoDB, JWT, Google OAuth 2.0</i> - Architected real-time multi-user collaboration using Socket.io for live presence indicators, board updates, and instant notifications without page refreshes. - Engineered a scalable per-user read/unread comment system using a dedicated CommentRead model with upsert patterns to ensure accurate delivery. - Implemented workspace management with role-based access control, join request flows, and dual JWT/Google OAuth authentication systems. Live: shipit.gosagirma.me and GitHub repo	
EchoStudy — AI-Powered Study Hub, 01/2026 – 04/2026 <i>Stack: React, TypeScript, Node.js, MongoDB, Google Gemini API, Zod, Jest</i> - Integrated Google Gemini AI API to auto-generate flashcards and study summaries from user-submitted study files and YouTube links. - Designed type-safe RESTful APIs with Zod runtime schema validation, significantly reducing frontend-backend data mismatch errors. - Implemented the SuperMemo-2 (SM-2) scheduling algorithm to drive personalized flashcard reviews, ensuring logic reliability through strict Jest unit testing. Live: echostudy.gosagirma.me and GitHub repo	
WatchVault — Cinematic Discovery Platform, 08/2025 – 12/2025 <i>Stack: React, Node.js, Express, Google Gemini API, TMDB API, Framer Motion</i> - Built a recommendation engine powered by Google Gemini that analyzes saved watchlists to surface personalized movie suggestions via a Node.js/Express backend. - Implemented dynamic client-side routing and optimized state management to execute high-speed search and filtering across thousands of TMDB records. - Delivered a mobile-first responsive UI utilizing Framer Motion for smooth, optimized cross-device layout transitions. Live: watchvault.gosagirma.me and GitHub repo
